HELPING YOU DO YOUR BEST WORK

REMOTE WORKING SECURITY RISKS & TIPS

WHAT IS REMOTE WORK SECURITY?

Remote work security is critical to protect a business's data and other assets when people do their jobs outside of a physical office. More than 50% of Canadians are working remotely. Still, 90% of IT professionals believe remote workers are not secure. This could be because 3 out of 4 remote staff have not received cybersecurity awareness training. Experts like Clearbridge can help mitigate remote work security risks to keep companies and their employees safe.

CREATE A WORK FROM HOME SECURITY POLICY

- 01 Clearly define which positions are eligible for WFH and list the approved tools and platforms for use.
- 02 Provide employees with steps to follow at the first signs of account compromise.
- 03 Provide employees with training that will help them recognize the risks and to know what to do when cyber incidents occur.

WHAT ARE SOME BEST PRACTICES?

MULTI-FACTOR AUTHENTICATION

The more security layers in place, the harder it is for cybercriminals to access your sensitive information.

USE A PASSWORD MANAGER

Encourage unique passwords, and discourage using the same password for multiple accounts.

KEEP SOFTWARE UP-TO-DATE

Updates (including antivirus updates) help patch security flaws and safeguard your computer.
